the problem of cell phone radiation has gained attention due to the growing usage of mobile devices in our daily lives it discusses the radiofrequency rf energy that mobile phones which comprise both smartphones and regular cell phones emit this radiation is a form of non ionizing electromagnetic radiation which means it lacks the energy to ionize atoms or remove electrons in contrast to ionizing radiation like x rays or nuclear radiation the primary concern with radiation from cell phones is their close proximity to the human body particularly when the device is held close to the head while on a call the main source of radiation from cell phones is the antenna which transmits signals to communicate with other devices and cell towers research has been done to assess the potential health effects of prolonged exposure to cell phone radiation with a focus on the risk of developing certain types of malignancies especially brain tumors because the scientific community is still split on the long term health impacts ongoing study is still being done on this complex issue

are cell phones dangerous mobile phones have become widely used all over the world and pose some serious questions are they safe how serious is the danger charles w leighton takes a look at mobile phone radiation and the effects on your health in this interesting easy to read edition many related topics are further explored as well in this useful reference source for this controversial issue

one of the most common concerns that cell phone users have is the possible health risk that could occur as a result of cell phone use cell phones are typically placed against user s head and ear in a telephone conversation this position makes it possible for a portion of the radiation to be absorbed by human tissue because all cell phones emit some electromagnetic radiation given the close proximity of the phone to the head it is possible for the radiation to cause a certain degree of harm to the user what is being debated in scientific and political realms is just how much radiation is considered unsafe and the existence of any potential long term effects of cell phone radiation exposure
